HOUSEHOLD HAZARDOUS WASTE

Tradebe offers the industry's most complete household hazardous waste collection service. Working with numerous municipalities nationwide, Tradebe provides a complete and cost-effective service to help communities dispose of household hazardous wastes. Outdated household hazardous wastes can represent a serious risk for individuals and communities. At Tradebe, our Household Hazardous Waste collection programs are well organized, convenient and tailored to meet the specific requirements of each community. We offer a full range of collection and disposal services, for materials such as left over paints and solvents, cleaners, pesticides and herbicides, pool chemicals, outdated medicines, cosmetics, batteries and more.

Our Household Hazardous Waste collection programs are complete, convenient, environmentally friendly and cost-effective

Household Hazardous Waste

Wastes containing toxic, flammable, reactive or corrosive ingredients such as paint thinner, fluorescent lights, pesticides and car batteries can be harmful to humans, wildlife and the environment if disposed of improperly. Our collection programs help remove these wastes from communities and dispose of them in an environmentally sound manner.

Household Hazardous Waste

Tradebe, through its Technical Field Services division, is one of the nation's largest and most experienced on-site providers of community based household hazardous waste collection programs.

Flammable liquids are properly "bulked" prior to transporting.

Left unmanaged, wastes such as paints can pose a potential health risk to individuals and wildlife. From March to December, Tradebe manages at least one event every weekend. It is not unusual for us to manage three events

simultaneously. Our programs are successful because we bring far more than just equipment to your site... we bring an experienced team and a proven program that attends to every detail from set up to clean up.

Organization makes Tradebe HHW programs successful. Traffic lanes are set up to insure participants can drive in, unload safely and drive out in the minimum of time.

Here is the checklist that makes Tradebe HHW programs so successful.

- Set up
- Site Plan
- Entrance Station
- Traffic Lanes
- Receiving Stations
- Lab Pack Station
- Decontamination Station
- Spill Containment
- Protection Gear
- Safety Equipment
- Emergency plans
- Bulking equipment
- Transportation
- Site Clean up

Recycling is the Priority

All collected wastes are unpacked in one of the country's most advanced processing centers. Each of the four chemical-specific processing modules features positive pressure live air lines for personnel, as well as fire suppression and vapor neutralization/containment systems. Every step in the process is monitored using a computerized bar code tracking system.

Tradebe's Lab Pack Center

Certain chemicals require special unpacking environments. Tradebe's modular Lab Pack center is specially designed to ensure maximum safety, efficiency and regulatory compliance.

Household Hazardous Waste Leadership

- More than 25 years experience
- Fully trained and equipped team
- Convenient, cost-effective service
- Tradebe recycles a high percentage of the waste collected
- Start to finish management expertise.

Tradebe - keeping your community safe while protecting the environment.
