Sustainability at Work

TRADEBE

IDENTITY

TRADEBE's ultimate goal is to build a sustainable business that provides innovative, high-quality environmental services - recycling, energy recovery, hazardous waste treatment and other waste management solutions.

Our mission and values are the pillars on which we build the company's growth. They are an expression of our commitment to all of our stakeholders: customers, employees, shareholders, government authorities, the community and the environment.

VALUES

CUSTOMER ORIENTED

We solve our customers' needs by offering quality and innovative services

RESULTS ORIENTED

We quickly make decisions aimed at achieving results.

COMMITTED TO PEOPLE

We contribute to the personal and professional development of our personnel.

ENVIRONMENTALLY FRIENDLY

We conduct our activities by applying sustainability criteria.

MISSION

At TRADEBE, we work internationally to offer quality, innovative environmental services that contribute to sustainable development and provide value to our customers, shareholders and personnel.

**Industry
Leader in
Technical
Services
since 1986**

Our experienced chemists are highly skilled in handling hazardous materials safely, effectively and responsibly.

EXPERIENCED CHEMISTS

TRADEBE has the regulatory experience, technology, and chemical knowledge to complete Technical Service projects, including chemical packaging, properly and safely.

WHAT WE DO WHILE ON SITE

- *Identify all chemicals*
- *Classify, segregate, and package all chemical waste*
- *Prepare a detailed chemical inventory*
- *Package all chemicals in DOT approved containers*
- *Satisfy all DOT and EPA labeling requirements*
- *Prepare manifests and other necessary shipping documents*
- *Ship & Transport your packaged chemicals to one of our fully-equipped TSD facilities for processing*

Chemical Packaging

"Lab Pack" What is it?

CHEMICAL PACKAGING

A "Lab Pack" is a term used to describe a container - *typically a 55 gallon fiber or steel drum* - filled with various small quantity containers of laboratory chemicals.

The small containers within the drum are usually packed in an inert material such as vermiculite or other such material that allows safe transport of the waste chemicals.

TRADEBE has the staff and technology to handle virtually all chemical types that accumulate as a natural part of work, production or research. Typically, these chemicals are obsolete, off-spec, leaking or unidentified and frequently stored in an unsafe manner. They are potentially dangerous if left unattended.

"Lab Pack" chemical identification and management is a job for knowledgeable professionals. Hundreds of different chemicals can often be found at just one site. That is why with this job, experience counts!

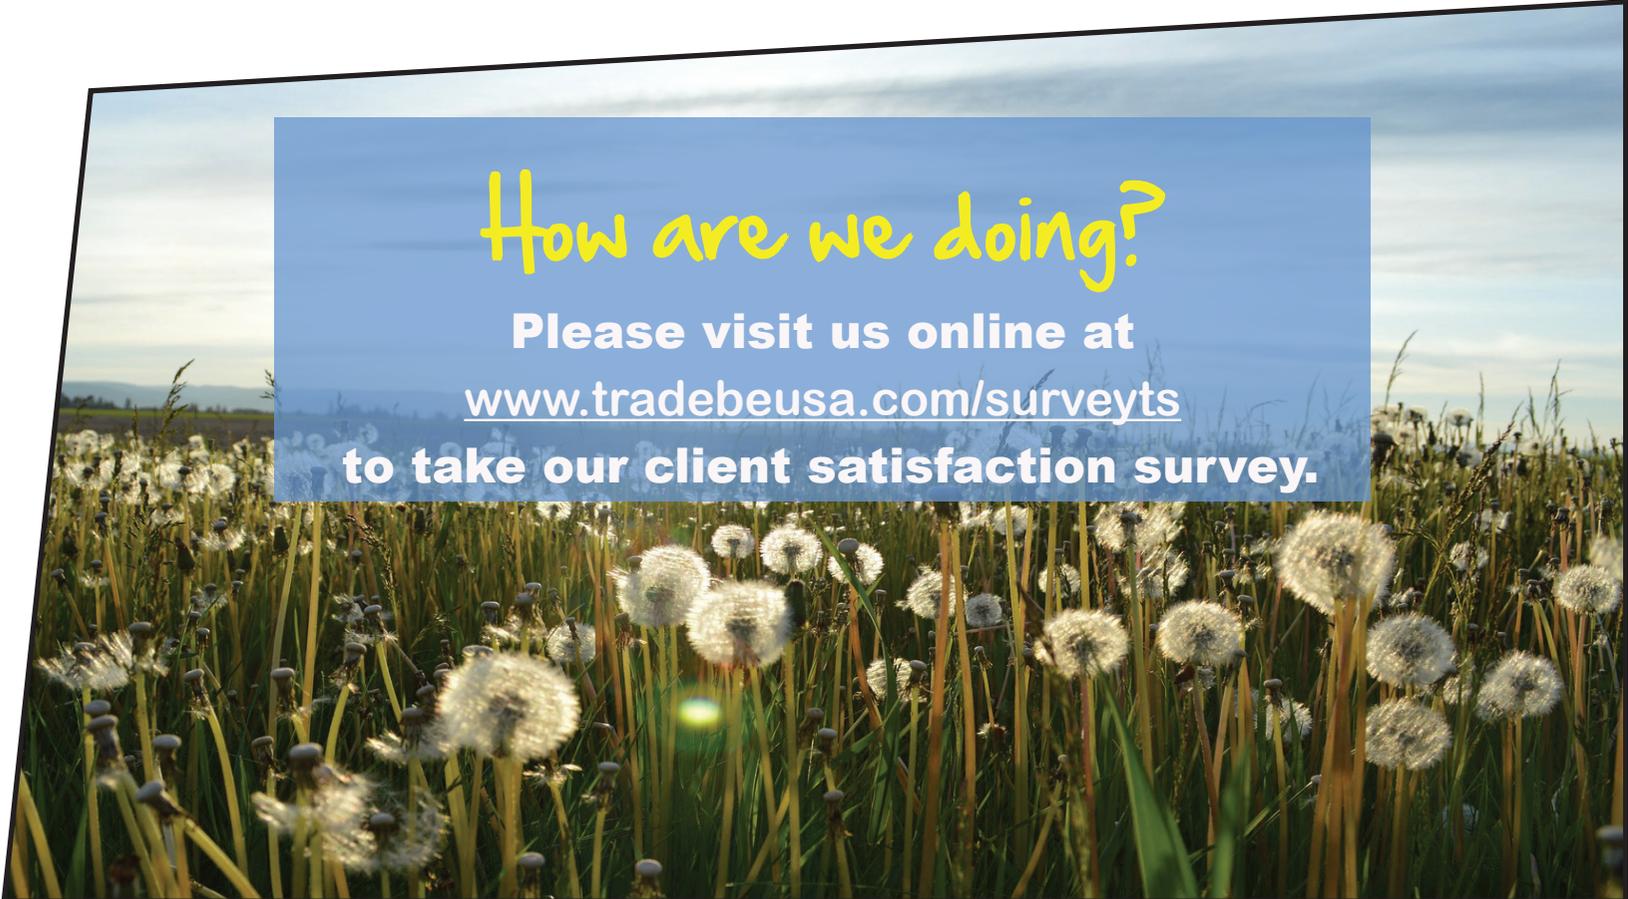

TRADEBE's DEPACK FACILITY - one of the nation's premier facilities of its kind

Chemical packs are depacked in one of four chemical-specific modules in this facility. Each processing module features positive pressure live air lines for personnel; as well as fire suppression and vapor neutralization/containment systems.

Every step in the process is monitored using a computerized bar code tracking system.

SERVICE YOU CAN TRUST

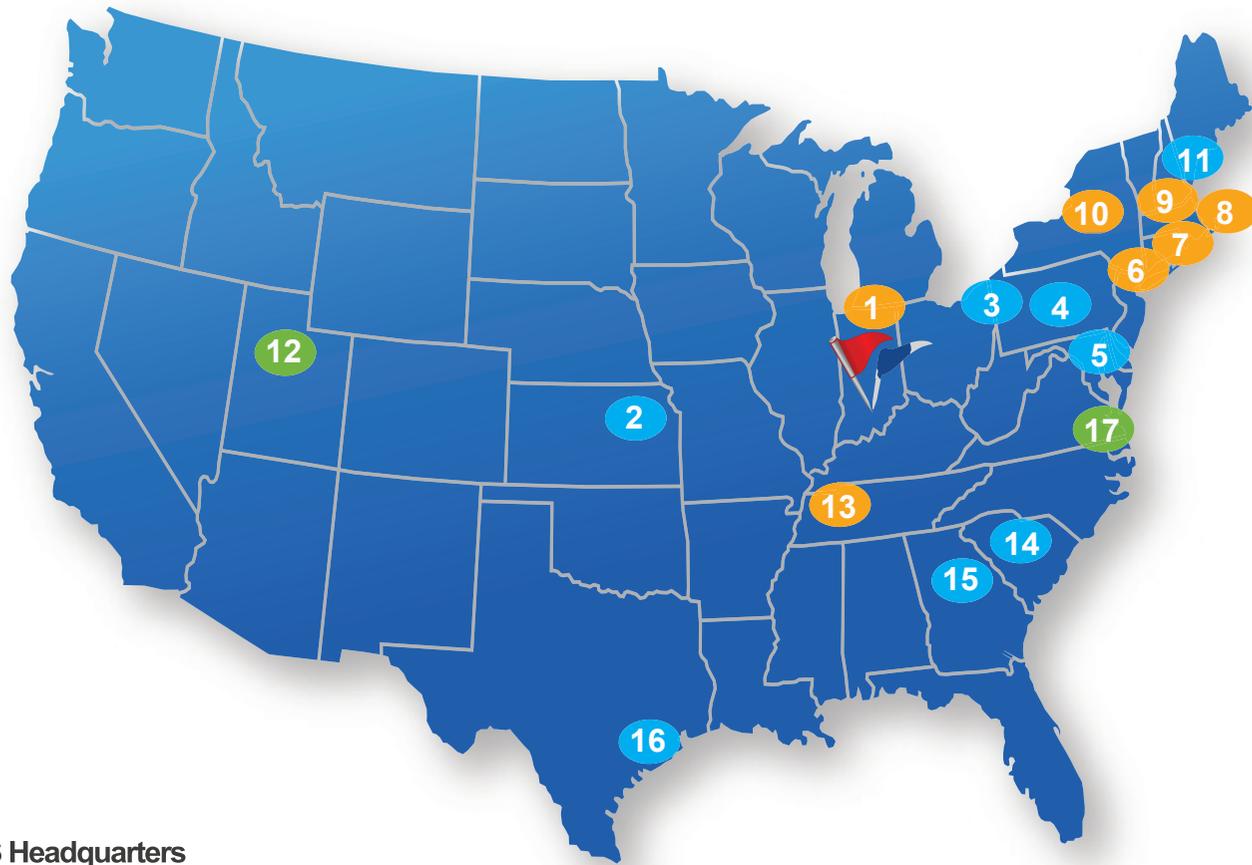

Hospitals, government agencies, academic institutions, manufacturing companies, medical facilities, research centers, laboratories and more depend on TRADEBE to manage their obsolete, off-spec, unidentified or improperly stored chemicals with an environmentally sound, turnkey service.
